Task 1

In this task you have to create a exchange page.

On this page you should have opotunity to choose currency for `currency 1` and for `currency 2` inputs. For this feature you can use any kind of view.

Acceptance criteria:

- You should use real AP. Example for reading real rate between `USD` and `EUR` : `https://api.exchangeratesapi.io/latest?base=USD&symbols=EUR`
- `currency 1` should be an input with number type
- `currency 2` should be an input with number type
- When we change the input `currency 1` , input `currency 2` should be updated automatically
- Feature for choosing currency should be usable
- This page should looks nice
